

EsPresto eRoom

Successful & Effective Collaborations

EsPresto eRoom provides an optimized collaborative work environment that enables managers to plan and execute a project independently from time and location

Efficient team projects

While working together with business associates and colleagues on joint projects, operations run smoothly despite being in different locations and having time restrictions.

Real life is not always that simple.

Nonconformities and a lack of communication

Working with multiple versions of a document or having insufficient overview of the project will interfere with meeting company goals and expectations. Getting current information is difficult when being out of the office or on business trips. The internal or external contact person is not always easy to reach when having troubles with the project.

Optimal Communication, Coordination and Cooperation

EsPresto eRoom is a web-based and platform independent groupware-solution. The optimal support for collaborative Projects, which run through different timezones or multiple location sites.

Virtual workspaces are quick and convenient to set up. Accessible for Colleagues or external partners, but highly secured against unauthorized individuals.

Your project and results are the main priority - the organization runs smoothly and efficient.

EsPresto eRooms are ideal for Teams, that work throughout different locations or collaborations and exchanges which go beyond company limits.

Peter Biersack, COO - EsPresto AG

“Next to clearly defined goals and best available resources there are several keyfactors for successful projects; having access to every project member's current and relevant information, smooth running workflows and a good quality management. All this - without interruptions - is what EsPresto eRooms stands for.”
